

Noise Policy

The Murrina Group will provide employees with a healthy work environment.

We will achieve this by:

- Undertake risk assessment of any new plant and equipment to ensure it meets or exceeds the relevant Australian Standard or Nationally recognised guidelines in respect to generating noise.
- Ensure all plant and equipment is maintained on a regular basis including sub-contractor plant and equipment.
- Ensure any persons working on the site under our control will only do so at the hours stated for work in the council development approval and site management plans.
- Use of radios will be restricted on site
- Ensure adequate control measures, according to the hierarchy of Controls are developed in job procedures and Safe Work Method Statements (SWMS) to reduce noise on the job.
- Ensure appropriate PPE is worn where in designated areas or as stipulated within the SWMS.
- Where applicable, provide appropriate training and education to those employees working within areas that are designated as having a high level of noise.
